Gladiolus - - - Spring 1950

Introductory Message

THE year just ended was most gratifying for us here at Croix Farms, for it meant an increase in our business, new friends gained and a strengthening of old ties. It is indeed a great pleasure to make new friends each season. We want you to know that we are especially interested in the success of your glads because therein lies the reason for the existence of our business. Furnishing you with the finest quality bulbs at a price that enables you to get top value is our continuous aim. Your enthusiastic reception of our offerings has been most gratifying and leads us to believe that we are approaching our goal.

We would like to have the privilege of meeting every one of you to thank you personally for your fine orders but of course that is impossible. I want you to know that we sincerely appreciate your business and confidence during 1949. For the year ahead it will be our purpose to continue meriting both. Thank you . . . and best wishes for 1950.

Special Collections

Our gladiolus collections have been unusually popular in past years, many preferring to order their bulbs in this way. Collection prices are considerably below the cost of the same varieties if they were purchased individually from the regular price list. We have placed the finest varieties in these groups and a good selection of colors. All come to you correctly labeled. Because of these very low prices no further discounts are allowed. However, any way you figure it, these are the best values ever offered anywhere.

How To Order

DISCOUNTS

Please note that the discounts apply only when cash is remitted with the order. No discounts are allowed on Collections, on varieties marked "Net," or on wholesale orders.

Cash Discounts

10% on orders from \$ 3.00 to \$ 5.00
15% on orders from 5.00 to 15.00
20% on orders from 15.00 and up

TERMS

Send remittance in full or 25% deposit; balance before shipment. Transportation charges prepaid on retail orders of \$2.00 or more. Under \$2.00, add 25c to cover handling costs and transportation charges. Do not send remittance in postage stamps as they cannot be exchanged for cash. As the planting and care of all bulbs sold by us are beyond our control, we cannot be in any way responsible for the results after planting.

QUALITY STOCK

Cheap prices are only made possible by inferior methods of growing or by careless handling of stock after digging. Such practices will be inevitably reflected in the quality of flowers produced. We have tried to meet fair competition and at the same time offer stock that is of the highest quality obtainable. Our prices, we believe, are as low as those of any other reputable grower and our discounts even greater.

MISCELLANEOUS INFORMATION

Large bulbs are 1¼ inches or more in diameter but in most cases will be 1½ to 2 inches, medium bulbs ¾ to 1¼ inches and small bulbs ¼ to ¾ inch. When there is a figure before the price such as 2-15 it means 2 bulbs for 15c. Five bulbs sold at the 10 rate.

CULTURAL DIRECTIONS will be included with each order when requested.

Extra Bulbs

We have always been very generous in giving extra bulbs and over-count which are included with each order. No change in this policy is contemplated this season. So just give us a trial and we will endeavor to more than please you.

Tips from One to Another

LEGUMES HARMFUL TO GLADS

Extensive research the past few years by plant pathologists have proved that virus diseases of gladiolus are transmitted from various legumes, chiefly beans, peas and certain sweet clovers. Aphids or plant lice feeding on the legumes and then feeding on the glads will infect these plants.

Virus can also be conveyed from one glad to another. For that reason destroy all plants that show mottled foliage or discoloration of blooms. Disease symptoms will show up the same season that infection is spread. Include along with your thrip sprays, a contact insecticide for killing the aphids, such as Black Leaf "40" or similar product.

QUALITY PAYS

The quality of Croix Farms bulbs has been carefully and surely built. But careful buyers are skeptical buyers. They need proof. They are not always willing to take the word of a grower himself. We will say this, however, that the demand for our bulbs is increasing year by year, and with more practical and efficient growing methods we can offer these high quality bulbs at well below what is being asked for comparable quality.

SOIL

Any good garden soil will grow glads—not too light or too heavy and slightly acid is best. Your State Agricultural Department can test it for you, telling you the degree of acidity and if lacking in certain fertilizer elements. Don't plow or spade your soil in the spring if it is too wet. Wait until it crumbles under pressure in your hand. Thorough working the soil so that it is pliable is necessary.

PLANTING

Large bulbs should be set 5 inches deep, medium bulbs 4 inches, small bulbs 3 inches and bulblets 2 inches. In extremely sandy soil plant a little deeper. For exhibition plant 6 inches apart—for home or commercial use, plant large bulbs 4 to the foot and closer for smaller bulbs. For best results plant in rows like vegetables and in a sunny location that is free of tree and shrub roots. They can also be grown in flower borders if not crowded too close among other plants.

Gladiolus Bulb Dips

NEW IMPROVED CERESAN

1-oz. new Improved Ceresan; 3 teaspoons of a spreader sticker; 3 gallons of water. Mix the Ceresan and spreader together, then add a small amount of water, stirring until a smooth paste is secured, after which add the remainder of water. Use a wooden paddle for stirring and don't get the concentrated mixture on the hands, as it can cause serious burns. Bulbs treated in the weakened solution can be handled without harm. Soak bulbs for 15 minutes, bulblets for 30 minutes and plant immediately.

LYSOL

4-tablespoons Lysol to 3 gallons of water or 1 pint Lysol to 25 gallons of water. Soak bulbs 3 to 6 hours and bulblets 12 to 14 hours. Plant same day, while wet if possible.

CALOGREEN

The use of Calogreen as a dip for the control of neckrot and scab on Gladiolus bulbs has been found very successful. It takes 1 lb. of Calogreen to 10 qts. of water or approximately 1½ oz. to 1 qt. of water. Stir vigorously to wet the particles so that they will better stay in suspension. Place the bulbs in a screen container and submerge them into the solution. Soak them for about 5 minutes, then remove and drain for a short time before planting. Plant wet. If large quantities of bulbs are to be treated the solution will have to be strengthened by the addition of Calogreen from time to time. Stir the solution after each dipping. After treatment the remaining Calogreen will settle to the bottom and this can be recovered for future use by filtering or drying. This is a very easy dip to use.

Summer Control of Thrip

Apply a 5% D.D.T. dust to plants, beginning when growth is about 6 to 8 inches high. Use every 10 days until blooming. If a liquid spray is preferred, mix 1 oz. of 50% D.D.T. with 3 gallons of water. The addition of 2 teaspoons of Dreft or other standard spreader is advisable.

Winter Control of Thrip

A light dusting of 5% D.D.T. on the bulbs in storage is most effective. About ¼ oz. to 1 peck of bulbs is sufficient.

THRIP

No trouble with these little creatures any more if D.D.T. recommendations are followed.

FERTILIZER

Scientific experiments have proved that indiscriminate use of commercial fertilizers actually can be harmful to the plant and makes them more susceptible to disease. It also causes a delay in blooming. The best method is to prepare your soil the year previous to planting, using animal manure, compost or green crops turned under, together with super phosphate. Most soils are not deficient in potash. If you have done this or used some other method to get your soil in good shape, it will not be necessary to use any form of fertilizer at planting time. One or two light side dressings of nitrogen applied during the summer will give you larger blooms. Another good practice is to fertilize at time of blooming or shortly after. The plant will take up this food and store it in the new bulb. Such bulbs will have the vitality to get off to a vigorous start the next season. A final precaution—it is better not to use any fertilizer than to use too much.

WATER

It is the water content in the soil that makes the nutriment available to the plant. For that reason it is important that your glad beds never dry out. If you want show blooms, use plenty of water. Frequent light applications is not good—one inch of water applied with overhead sprinklers is best.

All bulbs grown by Croix Farms are protected from damage due to drought by overhead irrigation. The right amount of moisture applied at the correct time definitely makes plumper bulbs that will produce finer blooms.

PRICES

In conclusion we want to state that you can't expect top grade gladiolus bulbs at dime store prices. Best success is obtained by planting the right kind of bulbs—that is young high crowned bulbs that are packed full of vitality, having received the proper culture the year previous. We give our bulbs that care.

MONEY SAVING DISCOUNTS

Why We Can Lower Prices

We believe our discounts to be the most generous offered anywhere. (See discounts on opposite page). Please note that you deduct the discounts in actual cash and not in extra bulbs as offered in most Glad catalogues. Then too, considering the high quality of our stock, together with our very reasonable catalogue prices and your conclusions will be—"It's a bargain!" However, our lower prices and outstanding discounts are not made at the sacrifice of quality but rather through keeping the catalogue cost down to a minimum, coupled with other money saving practices. We are happy to pass on these savings to our customers.

Gladiolus Chatterbox Review

IT is indeed a pleasure to chat about the newer glads and to review the performances of the better well-established varieties. The flow of new introductions is continuing at a rapid pace but it is our aim to offer only the very best. We are dropping from our list eighteen varieties that have been superseded by others with superior characteristics. Twenty-one new super beauties have been added. The following remarks are based on observations from field-grown glads with no attempt being made to force show spikes. While our results may differ from other growers, I trust that this résumé will prove both interesting and helpful in making your selections.

WHITE—One of the top whites the past season was **Florence Nightingale**—truly grand and well recommended. **Swing** is an exceptional good pure white except that attachment may be weak. Very appealing was the intensely ruffled **White Christmas** though not as reliable in growth as some. Pure white **Vrede**, with its air of elegance, is outstanding. **Mt. Index**, with its pure yellow blotch, proved to be of value as an early tall cut flower. Three good performers from Europe were **Snowflake**, **Nova Zembla** and **Roosevelts Memory**, all being large and tall. **Silver Wings** gave us a fine array of magnificent blooms. Of the older whites **Margaret Beaton** and **Snow Princess** are still going strong, the latter one of the leading cut flowers.

CREAM—Still a leader is **Leading Lady**—a great winner in this class. **Helen Eaken** was a bit earlier to bloom and this elegant cream has a mild green sheen on its lower petals. One of the most beautiful was ruffled **Connie G.** Its lustrous texture and color is a sight to behold, though it may not be as strong a grower as some. Huge **Oriental Pearl** is the strongest and largest in this group. **Lake Placid** was again a very distinctive white, while the older **White Gold** is still going strong. **Salmon Glory** is one of the better ones from Holland. It has a blotch but is very distinctive. **Lady Jane** is a most popular cut flower.

YELLOW—**Spotlight** still holds the spotlight though it is a blotched variety. It is grand. **Cynthia** was an exceptionally pleasing new medium yellow with slight frilling. It looks good. If you like the dazzling type try **Manchu**. **Belle Jaune** is proving to be an early cutter of value. Also early is the frilly **Yellow Herald**. One the most beautiful is **Crinkled Cream** and it really has class. **Gleam** is lovely but a bit short. **Oregon Gold** and **Van Gold** are still recommended.

BUFF—One of the most spectacular is the showy **Pactolus**. Its prominent scarlet blotch on a warm buff is very different. Buff Glads are always very beautiful but one of the best pastels is **Kawatiri** from New Zealand. A soft buff tinted pink at edges. **Sunspot** continues its winning ways. I am sure you will like it along with **Sunlight**. A beautiful spike of the ruffled **Arethusa** is still hard to beat for color and form. If the smaller dainty type are liked **Fairy Butterfly** cannot be beat. Its tall, airy, graceful spikes are in much demand for early cutting.

ORANGE—The new deep orange **Huahina** from Holland looked very good, but only tested from small bulbs. **Henri de Greeve** from the same originator, is very striking and should become very popular. **Orange Gold**, **Trocadero** and **Gratitude** are all tops but each a little different shade. **Kestral** and **Lantana** deserve recognition.

Special Awards

We have never published a complete list of all our show winnings but we would just like to point out here some interesting highlights. Over a period of the last 10 years, Croix Farms have been awarded 18 medals, including 2 gold, 7 silver and 9 bronze. These have been received from the following Gladiolus societies: New England, American, Canadian and Minnesota; also the Midwest Glad Show, American Peony Society, Pennsylvania Horticultural Soc., Minnesota Horticultural Soc. and Minnesota Peony and Iris Soc. In addition to the medals we received 15 silver cups and vases, 4 engraved plaques and countless numbers of ribbons given for sweepstakes, championships and special awards. We are proud of our show achievements. Our customers can do likewise if they plant championship stock.

SALMON—**Polynesie** was very impressive, color being slightly darker than **Picardy**. An unusually strong grower and top show and commercial prospect. Also very impressive were **Prosperity** and **Victory Queen**, **Spic** and **Span** continues to gather in the blue ribbons, though there are other colors I like better. **Dieppe** is one of the grandest glads and would place in my estimation in the ten best. Its color is a mellow salmon scarlet. **Harmau** is similar but not quite so brilliant.

SCARLET—**Pfitzers Century** stood out for us in this class along with **Johan van Konyenburg**, both being European introductions. Though tested in more limited quantities **Je Maintiendroi** gave us some fine tall spikes. The flashy **Beacon** and artistic **Algonquin** are worthwhile.

PINK—**Friendship** was really nice. Here is a glad that you can't help but love for its pure color and distinctive fine spikes. **Skyway** was another color favorite. Florets are the purest pink and of rounded form. None better. Lighter in tone is the fine Buff pink **Evangeline**, one of Prof. Palmer's best. Blush pink **Beautys Blush** was excellent again. **Phantom Beauty** will open a ribbon of bloom of a warm shell pink tone. This along with **Treasure Island**, **Bernard Shaw** and **President Truman** were all very outstanding. **Lady Boo** should appeal to both grower and florist because of ease of culture and fine color. Of the older pinks **Pandora**, **Camrose** and **Ethel Cave Cole** are still tops.

RED—**Red Wing** appears to be one of the better reds. It is a richly colored, slightly ruffled beauty. Also outstanding was the large and bold **Intruder**. One of the most brilliant is **Feuerreiter**, a fine Pfitzer variety. A wine red of promise is **New Amsterdam** coming to us from Europe. Tall ruffled **Red Rascal** was pleasing on one year's trial. **Red Charm** is in there still battling with the leaders. Tall **Black Opal** is the richest toned black red.

ROSE—One of the finest glads to come to us from Europe is the exquisite toned **Tivoli**. A great glad destined to become a leading commercial. **Adoration**, a light toned orchid pink looks promising and very early too. **Gen. Eisenhower**, **Topflight** and **Betty's Choice** are a fine trio, the latter being a lighter version of **Chamouny**. **Rose O'Day** and **Rose Charm** are tops in the deeper shades. Rich toned rose-red and heavily ruffled **Burma** is one of the great glads of the past several years. It's a sensation. **Rosy Red** was rather nice too.

LAVENDER—**Elizabeth the Queen** still leads the parade in this group. It's an exquisite ruffled beauty. The nearest to true lavender is **Patrician**. If it continues to perform well it will rank with the leaders. **Benjamin Britten**, a deep toned lavender approaching light purple, is very different and may become a valuable commercial. **Ruth Ann**, a pink lavender with an orchid blotch, looks promising. The dark mauve lavender **Parthiema** is a new giant that has winning ways. **Minstrel** also has giant florets which are butterfly type, being slightly ruffled and needle pointed. **Lavender Prince** is a good commercial as is the smaller flowered **Lavender & Gold**.

PURPLE—**Lancaster** and the older **King Lear** are perhaps the most beautiful and they really have class. **Purple Supreme** and **Dorothy Armstrong** are reliable commercial purples. The very large **Mrs. Marks Memory**, a rose purple, was well liked.

VIOLET—One of the largest blues we have grown was the light toned new **Libretto** from Europe. Looks promising on one year's trial. We liked the clear blue toned **Blue Boy** with its contrasting darker throat. **Ravel** is going to make a grand cut flower of medium violet. It is very large and tall. **Abu Hassan** is the darkest toned but smaller than the above mentioned. **High Life** is a light blue also of moderate size.

Free Garden Information

Folder A, a product of the Minnesota State Horticultural Society, is a condensed form of garden information that is unusually useful and practical. We will send this to you FREE with every order of \$2.00 or more. It contains information on fruits, vegetables, flowers, trees and shrubs, giving recommended varieties and spray program for each. Controls are given for thrip, Rose blackspot, crown rot of Iris, blight of Peonies and Lilies, cutworms, pocket gophers, moles, rats, grasshoppers, dandelions, rabbits, mice and many other controls too numerous to mention. It also tells what plants are suitable for rock gardens, what plants endure shade, planting distances for fruits, and vegetable varieties recommended for the home freezer. In fact you will want to keep this folder handy for reference at all times.
